

ANAGHA VEENA SANJEEV

Boston, MA(Open to relocation) | (857) 398-5307 | anaghavs09@gmail.com | [linkedin/anagha-v-s](https://www.linkedin.com/in/anagha-v-s) | [github/anaghavs](https://github.com/anaghavs)

EDUCATION

Northeastern University, Boston, MA

December 2025

Master of Science in Data Analytics Engineering, GPA: 3.8/4.0

Related Courses: Applied Generative AI, Applied NLP, Data Mining Engineering, Statistical Learning, Computation and Visualization

NMAM Institute of Technology, Karnataka, India

June 2023

Bachelor of Engineering in Information Science and Engineering, GPA: 8.66/10.0

Related Courses: Machine Learning, Statistics, Database System Models, Data Science, Deep Learning, Python Programming

SKILLS

Programming languages: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, R

Data Modeling & ETL: dbt, Data Cleaning, Data Transformation, SQL Queries, Data Validation

Data Visualization & BI: Tableau, Power BI, Matplotlib, Seaborn, Dashboarding

Analytics & Modeling: Time-Series Forecasting, Predictive Modeling, Statistical Analysis, Optimization Techniques

Supply Chain & Operations Analytics: Inventory Optimization, Safety Stock Calculation, Demand Forecasting, OTIF Analysis, Supplier Performance Metrics

Cloud & Tools: AWS Athena, Git/GitHub, Jupyter Notebook, Excel

Soft skills: Problem Solving, Analytical Thinking, Data-Driven Decision Making, Data Storytelling, Cross-Functional Collaboration, Stakeholder Management, Attention to Detail, Time Management, Prioritization, Adaptability, Continuous Learning

Certifications: [JPMorgan Chase & Co. Excel Skills Job Simulation](#), [Managing Big Data with MySQL](#), [AWS Cloud Practitioner Essentials](#), [Data Engineering on AWS](#), [Generative AI - AWS](#)

PROFESSIONAL EXPERIENCE

Cohere Health, Boston, MA

January 2025 - June 2025

Business Intelligence Engineer Co-op

- Created and improved 6 client-facing **dashboards** and **compliance reports** in **Tableau**, helping teams easily track utilization and program performance each month.
- Executed and optimized **SQL** queries in **AWS Athena** to clean and validate large healthcare datasets, ensuring reports were accurate and reliable for decision-making and reducing reporting errors by 15%.
- Built and maintained **dbt models**, version controlled to provide scalable reporting, making it easier to track cost, utilization, and operational performance across multiple programs.
- Conducted **data testing** and **quality assurance** to make sure reports were correct and compliant with healthcare standards, supporting effective program evaluation, correcting over 90% of data inconsistencies.
- Documented metrics and metadata for a self-service query builder, letting clients and teams run ad hoc analyses independently and reducing average query **turnaround time by 50%**.
- Worked closely with Product, Data, Design, and Engineering teams to deliver insights that supported collaboration between payers and providers.

Exposys Data Labs, Karnataka, India

June 2022 - June 2023

Data Analyst Intern

- Analyzed end-to-end **supply chain** data using **Python** and **SQL** to evaluate supplier performance, lead time variability, and delivery reliability across manufacturing and retail clients.
- Built and maintained supplier performance metrics, including **lead time variability** and **OTIF**, to support procurement and operations decision-making to reduce late deliveries by 20%.
- Developed **SKU-level demand forecasting** models in **Python** using historical sales data to capture seasonality and demand trends for inventory planning improving inventory planning accuracy by 15%.
- Evaluated forecasting model accuracy using standard error metrics (**MAPE**, **RMSE**) and refined models to improve demand prediction reliability to reduce forecast errors by 10%.
- Translated analytical findings into actionable insights for stakeholders, supporting **inventory optimization** and supplier management strategies that improved **stock allocation** and reduced stockouts by 15%.
- Created interactive **dashboards** and **reports** using **Tableau** to communicate trends, risks, and performance insights.

PROJECTS

Dynamic Safety Stock Optimizer | [Link](#)

- Built a **Python-based safety stock optimizer** comparing statistical, heuristic, and **GenAI-driven** methods to improve inventory planning under demand and lead time uncertainty.
- Optimized **AI-driven safety stock calculations** to scale across multiple SKUs while maintaining stable performance under high-volume scenarios.
- Benchmarked stockout risk and inventory buffers across SKUs and visualized results through dashboards for decision support.

AI-Powered Investment Portfolio Analyzer | [Link](#)

- Built a multi-factor investment analysis system using **Python** and a **multi-LLM architecture** to evaluate stocks based on technical, fundamental, sentiment, and economic signals.
- Designed a normalized scoring framework to support portfolio rebalancing under changing market conditions.
- Created an **interactive AI advisor** to answer investment queries using real-time data and **LLM-driven insights**.
